

Recommendation Letter

JSC "Financial and Investment Corporation Alel" hereby confirms that in 2024 and 2025, LLP "Corrocoat Caspian" successfully carried out composite repair and internal surface protection works on the CIL tanks of our metallurgical plant.

During the execution of the project, the industrial coating systems Polyglass VEF, Polyglass VEF WR, Corroglass Series 600, as well as L600 Series Laminating Resin, manufactured at the Corrocoat Caspian production facility in the Republic of Kazakhstan, were utilized.

The application of these technologies enabled the successful resolution of several critical issues, including the elimination of severe pitting corrosion, restoration of metal geometry, prevention of further wall thinning, and protection against both chemical corrosion and abrasive wear. Furthermore, these systems significantly extended the maintenance interval from two–three months to up to two years at the moment.

The Polyglass VEF and Polyglass VEF WR coating systems were tested in our laboratory and confirmed to have no adverse impact on the bacteria used in the leaching process.

In addition, Plasmet ZF aerosol coating was applied to steel structures in various plant areas, including the desorption section of the metallurgical facility, to protect them from aggressive reagent vapors and cyanide solutions. The applied coating demonstrated excellent adhesion and chemical resistance and remains in excellent condition to date.

All contractual works were completed within the agreed timeframes and in full compliance with occupational health and safety requirements, as well as international quality control standards.

The full professional team of LLP "Corrocoat Caspian" demonstrated a high level of expertise in corrosion, responsiveness, and rigorous quality control throughout all stages of the project.

On behalf of our company, we would like to express our appreciation to the team of LLP "Corrocoat Caspian" for the successful cooperation and confidently recommend the company as a reliable and highly professional partner.

Deputy Director for Metallurgy

JSC "FIK Alel"

I.S. Shevchuk
