Recommendation letter

In May 2020, Corrocoat Caspian did a trial for KAZ Minerals Bozshakol to protect badly damaged components of Sykes pump by applying corrosion protective composite coatings, which are manufactured in Kazakhstan. The components suffered from pitting corrosion as well as from erosion and abrasive wear 2 months after their installation.

After a test lasting for 12 months, in a harsh Bozshakol mine operational environment, where the presence of chemical corrosion, erosion and abrasion impact were very high, the Polyglass and Corroglass systems as well as Laminating resin 600 (in combination with fiberglass) performed effectively to provide a long-term protection. After trial passed successfully, our company signed the contract with Corrocoat Caspian to refurbish the other different diameter corroded pumps. These pumps are still in service without any repair.

In addition, Corrocoat Caspian supplies Plasmet ZF coating aerosol to protect the external of fuel tanks, truck frame structures and other mining equipment from corrosion and rusting. This coating can be applied on corroded and rusted surface with a minimal surface preparation, which can significantly save time and extend the service life of the equipment.

Given the above, we recommend Corrocoat Caspian as a reliable partner that meets the high requirements for the quality of selected technologies and coatings, service and deadlines.

Senior Reliability Engineer Mainenger A.A.
