28.10.2014 № 385

Reference letter

Corrocoat Caspian LLP coated two screws for mixing the malt in 2015. The working environments is highly abrasive and corrosive. Polyglass VEF material was used for the job.

Polyglass VEF material was chosen due to its abrasion resistance properties in addition to its chemical resistance to highly aggressive environments. The material is manufactured locally at Corrocoat Caspian facility in Almaty, Kazakhstan.

Currently the coated screws are still in operation after more than 5 years in service. This allowed our company to save considerable cost on screws replacement.

Malterie Soufflet Kazakhstan JSC recommends Corrocoat Caspian LLP as a reliable contractor for corrosion protection of various equipment in highly aggressive and abrasive environments.

Best regards,

General Manager

E.A.Vasilenko
